Alumni Book
BIH Charité Clinician Scientist Program
2026

From a small group of pioneers to a large community of Clinician Scientists with a shared commitment to translation

Unbelievable but true – our Clinician Scientist Program celebrates its 15th anniversary in 2026! This very special milestone inspired us to compile this booklet about our program alumni giving you, dear readers, an overview of our diverse interdisciplinary community. With over 400 alumni, we have the largest pool of Clinician Scientist alumni in the whole of Germany – so you can look forward to the diverse range of profiles we have compiled on the following pages. But let‘s take it step by step…

When the Friedrich C. Luft Clinical Scientist Program was launched in 2011 as a pilot, it was among the first initiatives in Germany to establish a structured career path for research-active physicians combining clinical practice with academic research. Starting with just eight fellows, the program has grown continuously over the years. In 2015, it was integrated into the BIH Biomedical Innovation Academy (BIA), and was renamed as the BIH Charité Clinician Scientist Program. Today, it supports more than 130 fellows, making it by far the largest program of its kind in Germany. What began as a pioneering initiative in Berlin has also contributed to a broader systemic transformation of academic medicine in Germany: over the past 15 years, Clinician Scientist Programs have become established at nearly all medical faculties and university hospitals across the country.

This development reflects a shared conviction that clinical practice and academic research should not be separate career paths, but mutually reinforcing dimensions of university medicine. Building on this principle, BIH and Charité have continuously developed the program to support physicians in pursuing their individual research interests while remaining actively involved in patient care. Its portfolio encompasses funding lines for (Junior) Clinician Scientists, (Junior) Digital Clinician Scientists and for Advanced Clinician Scientists, addressing different career stages and research profiles. Across these funding lines, “protected time” for research, mentoring, a competence-based curriculum and an interdisciplinary environment provide the foundations for pursuing ambitious research questions with the potential to advance medicine and improve patient care.

At the heart of the program, however, are the fellows and alumni who shape and have shaped it. The alumni represented in this booklet reflect the breadth of clinical disciplines, research fields and scientific approaches brought together under the umbrella of the BIH Charité Clinician Scientist Program. Each has followed an individual career path, developed their own research profile and contributed in their own way to strengthening the connection between research and patient care. Together, they form a diverse and growing community whose members share a common experience and commitment of translation in academic medicine, while pursuing a wide range of target positions – in academia, the clinic or beyond.

The origins and development of the BIH Charité Clinician Scientist alumni community are closely associated with Professor Duška Dragun († 2020), the founding Director of the program, whose pioneering vision and dedication were instrumental in establishing the Berlin model. The scale and breadth of the Program and its funding lines today, and their contribution to shaping the landscape of academic medicine in Germany, reflect the lasting impact of the foundations she established.

The alumni profiles in this booklet provide an insight into the diverse career paths and research contributions of former fellows. They document each alumna's or alumnus's program affiliation and funding period, institutional affiliation during the program, and research project, complemented by their last known academic title and contact email address – all based on the information provided by the alumni themselves. As the alumni community continues to grow, this booklet will evolve with it and will continuously be updated – bringing together successive generations of BIH Charité Clinician Scientists and keeping their achievements and connections visible.

We warmly invite all alumni to stay in touch with the program management and to share any updates to their academic title, institutional affiliation, current position or contact details. We hope this booklet will not only be a record of what has been achieved, but also an invitation to maintain connections, exchange experiences and continue to strengthen the community that brings us together. Last but not least we hope that this booklet is not only of interest to the program alumni themselves, but also to current fellows as a networking opportunity and for learning from former generations of Clinician Scientists and their mentors. Having said that: We hope you enjoy scrolling through the following pages!

Funding and Financial Support

With the initial joint funding by Stiftung Charité and Volkswagen Foundation the Friedrich C. Luft Clinical Scientist Pilot Program could be implemented in 2011. This initial support enabled the establishment of one of Germany‘s first structured Clinician Scientist Programs.

After subsequent intermittent funding from Charité and additional support from Stiftung Charité, sustainable core funding could be secured in 2014, through long-term financial commitments from Berlin Institute of Health at Charité (BIH) and Charité – Universitätsmedizin Berlin. In this context, the program was integrated into the BIH Biomedical Innovation Academy (BIA) in 2015 and it was renamed as BIH Charité Clinician Scientist Program. Today, BIH and Charité continue to jointly fund the program.

Over the years, additional funding has been acquired from external research funding organisations and foundations for the further program expansion and its different Clinician Scientist funding lines. We gratefully acknowledge all organisations and funding bodies whose contributions have helped to establish, develop and sustain the program.

In addition, complementary third-party funding has supported the program – either through individual grants for fellows or in the context of larger collaborative grants with a specific thematic focus (such as Collaborative Research Centers). We would also like to acknowledge these funding bodies for their contributions to support our fellows.
