

## Short profile

Name: Agado Live

Medical field	Telemedicine/PT/OT/Neurology
Product type	Telehealth
Growth stage	Seed
Team	Tzach Goren, Vittal Tavor, Gili Yaron, Gili Shamai

### Description of product:

**Agado Live reinvents online rehabilitation exercise by enabling personalized live group sessions & on-demand practices that are effective, affordable and easily available.**

The platform conducts a remote initial assessment for each patient that includes a physical, speech & cognitive test. Following the assessment, each participant is prescribed a tailored exercise routine.

The platform is designed to assist and motivate neurological patients that require physical exercise and monitored supervision on a regular basis and makes it easier for them to persevere with their personalized prescribed exercise routines without the need to visit the clinic.

#### How does it work?

Agado "clones" the physical therapist and delivers remote, private, personalized, engaging exercise sessions to multiple people simultaneously. This means several patients can carry out their own personalized training routines at the same time from the comfort of their own homes, guided by a single therapist using real-time video.

A virtual, AI powered trainer automatically analyzes movements & non-verbal cues during the session and corrects the patient if needed. The system tracks the user's progress/deterioration and provides full reports on the performance.

### Desired project goal: *Please also elaborate on the primary outcome*

The pilot study goals:

1. Patients: determine the feasibility and preliminary efficacy of remote PT sessions using the Agado platform.
2. Hospital: provide efficient PT sessions to multiple patients at the same time without increasing the professional headcount and other resources.

### Desired project type: *Please also elaborate on the following points, if applicable: population, intervention, study design etc.*

DR. HANA HASTOR, Medical Advisor CSC (CRU)

The platform will provide personal PA coaching & initial assessment delivered via telehealth to neurological patients (preferably MS & stroke).  
As part of the pilot we would need the hospital to provide the patients and a PT that will deliver the remote sessions using the Agado platform.
