3Rs in Meta- Research

27th-28th November 2023, Freiburg

The "3Rs in Meta-Research Meeting" in Freiburg offers a comprehensive exploration of the 3Rs principles, which are intended to replace animal experiments with alternative methods, reduce them, and refine experimental techniques.

Researchers, experts, and advocates come together to understand the practical implications of the 3Rs and how meta-analysis and systematic reviews can support their implementation.

The 3R Meeting bridges the gap between theory and practice, providing evidence-based strategies for promoting the 3Rs principles across various domains, thereby driving positive change in scientific research while upholding ethical standards. Through multidisciplinary dialogue, we aim to inspire meaningful advancements in the 3Rs paradigm for a more sustainable and compassionate scientific future.
