## Short profile Elminda Ltd.

CHARITÉ/BIH-PARTNER WANTED!  
More information [here](#)

Medical field	Psychiatry, Neurology
Product	Brain Network Analytics (BNA™), Clinical Decision Support Software/Diagnostics
Growth stage	CE, FDA-approved, positioning for scale
Founders	Ronen Gadot (Founder, CEO), Roni Sharon (Medical Director), Geri Katz (CFO), Dan Raudnitz (VP R&D)

### Description of product:

BNA™ - a cloud-based data-analytics platform that translates brain electrical signals (EEG/ERP) to actionable clinical insights as a treatment decision support tool for mental illness.

### Project goal:

Conducting a pilot study will be used to garnering KOL support and gathering performance and clinical utility data. We will disseminate the pilot study results as part of our marketing communication strategy to facilitate clinical adoption. BNA tests will be offered to MDD patients before and along their treatment course for a period of 1.5-2 years, with the following primary objectives: (1) To provide real-world clinical evidence for increasing treatment efficacy by promoting personalized treatment for these patients. (2) To demonstrate economic and cost mitigation benefits of such personalized treatment over the current standard of care.

### Project type:

Under the current call for proposals, we would like to propose a pilot validation project that will include implementation of the BNA™ solution at the partner's hospital to demonstrate the benefits of using the platform. The project will include the installation of a BNA system in a psychiatric clinic/department and a short training program on how to use the system – from both technical and clinical perspectives.

Eligible by the IIA
