

Short profile EyeControl

CHARITÉ/BIH-PARTNER WANTED!
More information [here](#)

Medical field	ICU
Product (name and type)	EyeControl, wearable communication device, diagnostics (monitoring)
Growth stage	Completed product for ALS-patients
Founders	Or Retzkin (CEO, Co-founder), Itai Kornberg (CTO, Co-founder)

Description of product:

EyeControl is a wearable personal communication device that gives a voice to locked-in patients. Using audio feedback and eye gestures, the EyeControl is a standalone portable device that allows for immediate and around-the-clock communication.

Eligible by the IIA

uzi@eyecontrol.co.il

Or Retzkin: +972-52-649-0093

www.eyecontrol.co.il

Project goal:

We already have a product which we are considering expanding into another market and field - management of Delirium in the ICU. We know that Charité are world leaders in this field as so this opportunity is very exciting for us.

Project type:

Once our solution enters facilities, medical staff will suggest additional ways to utilize the EyeControl; including detection of medical conditions, data analysis, and staff communication, resulting in improved patient care and reduction of accumulated healthcare costs. Immediate output includes assessing the intended reduction of ICU Delirium and shortening hospital stays. Estimated Project Duration: 18-24 months.
