

Short profile (Medisim Ltd)

CHARITÉ/BIH-PARTNER WANTED!
More information [here](#)

Medical field	Ophtalmology
Product	BinoVision™, Medical Devices /Treatment
Growth stage	Proof of Concept
Founders	Ilan Vadai, (CEO and co-founder), Moshe Yarden (CTO and co-founder), Yossi Wittman (VP of Business Development)

Description of product:

BinoVision™ is a novel system that includes binocular, head-mounted video goggles, based on research showing that dichoptic stimulation of the visual system can significantly improve visual function. Special and dedicated video goggles connect to any streaming video source, turning any content into a fun mode of therapy from home, so compliance is high. The proprietary SW\HW video eye-wear system is designed to affect audio & visual (A\V) brain stimulation to encourage brain plasticity. The treatment stimuli protocol presents separate and independent views of the same image to each eye simultaneously.

Project goal:

The goal is for long-term partnership to gain widespread adoption of BinoVision™ as a standard of care, addressing a poorly met need.

This includes product evaluation, case study, application to guidelines, preparing a Health Technology Assessment (HTA), clinical trials, finding a key opinion leader and co-commercialization.

Project type:

The company is looking for a clinical partner to conduct a clinical study with this novel system. Estimated Time for Validation: 6-12 months
Estimated Project Duration: 12-18 months

Eligible by the IIA
