

NUVO™

Short profile (NUVO GROUP LTD)

CHARITÉ/BIH-PARTNER WANTED!
More information [here](#)

Medical field	Gynecology, Obstetric
Product	Invu™, Women's Health, Wearables, Telehealth/ Diagnosis
Growth stage	Positioning for Scale
Founders	Oren Oz (Founder & CEO), Amit Reches (CTO & Project Leader)

Description of product:

Invu™, is a pregnancy monitoring and management platform, powered by Artificial Intelligence. The platform is comprised of: A self-administered, unique wearable sensor band which passively collects multiple sources of physiological signals (e.g., Fetal Heart Rate, Maternal Heart Rate, Maternal Uterine Activity) from mutually reinforcing fixed locations. Dynamic cloud computing environment ensures data capture, a visualization layer of connected mobile apps delivers a deep digital dashboard to the OB Team and a consumer-friendly view to the pregnant woman.

Project goal:

The pilot will be the first step forward towards both heads of the strategic partnership: (a) clinical implementation as a first stage in evaluating the viability and feasibility of a remote solution and (B) new research on the raw data sets collected on the patients will be mutually conducted retrospectively, for the development of new algorithms and predictive analytics, that will eventually require an additional clinical validation.

Project type:

Pilot Design. Estimated Project Duration: 12-18 months -Pilot will be targeted for beginning of Q2, and will last ~6-9 months.

- 15 systems, each system by a patient for up to 3 months.
- Will require 2-3 "cycles" in the field to complete
