

Short profile

P.Square Medical Ltd.

CHARITÉ/BIH-PARTNER WANTED!
More information [here](#)

Medical field	Urology, Primary Care, Home Care
Product	„PeePal System“, Medical Device, Diagnostics
Growth stage	Development, Clinical trials
Founders	Yosi Rozenberg (CEO, Co-Founder)

Description of product:

Non-Invasive system that monitors the urine flow through the urethra. The measurement is based on analysis of a vibro-acoustic signal recorded during urination. The tests could be done anytime, anywhere, thus allowing for a more reliable test results and it avoids the high operational costs that are currently incurred by healthcare systems.

Project goal:

- (1) Validate the PeePal system performance as claimed by P.Square Medical; non-invasive LUTS (BPH & BOO) diagnostic tool that could be used anywhere, anytime and could be fully integrated into existing deployed digital health networks.
- (2) Further to a successful validation, the hospital will be first to launch the services based on this system and technology, in its premises and within the population that it provides services to.
- (3) The hospital will agree to showcase the system to interested parties countrywide.

Project type:

The partner should appoint a main investigator from the urology department, as the main POC, with which P.Square will run the clinical trial. Also, the hospital should assign a research coordinator that runs the uroflowmetry and urodynamic tests to work with P.Square's professional, and exercise the PeePal system concurrent to the current diagnostic medical devices. The hospital should be one that runs high volume of these tests so as to get high count of tests within a relatively short period of time.
