# Short profile

## Personalized Preventive Diagnostics

Medical field	Pediatrics, Preventive Care, Neuroscience
Product (name and type)	Wearable ECG-monitora (Medical Device, Diagnostics)
Growth stage	Positioning for Scale
Founders	Abraham Kessler (CEO, Founder)

### Description of product:

BabyKeeper is a digital medical thermometer containing a data logger for identifying several risk factors for Sudden infant death syndrome (SIDS).

### Project goal:

Clinic: With this development, it becomes possible to early identify babies that are at high risk to encounter SIDS during their future development thus making it possible for prevention. Allow early identification of couples that face a high risk to deliver a baby having a high risk to encounter SIDS.

Company: The Company plans to apply FDA and CE submission for the test and medical device. Submission to the Japanese health authority for approval of the test and medical device. Global marketing of the product.

### Project type:

The Company is looking for a clinical partner to test and validate the device in a clinical trial in a specific population (families having confirmed SIDS case in the past).

Estimated Time for Validation: 3 to 6 months after completion of patient recruitment

Estimated Project Duration: 24 month.

Eligible by the IIA
