Short profile

SURE Universal Ltd.

CHARITÉ/BIH-PARTNER WANTED!
More information [here](#)

Medical field	Cardiology, Geriatric, Other
Product	SURE platform, Healthcare IT
Growth stage	CE-marked
Team	Dr. Viktor Ariel (Co-Founder, CEO), Chaim Green (CFO), Ran Barkai (VP of Innovation), Itzchak Bernstein (project leader), Ray Stata (Chairman)

Description of product:

An end-to-end standard-based (HL7 FHIR, OCF - secure consumer IOT) IoT-based remote medical supervision platform addressing very well the need to continuously diagnose and monitor remotely isolated patients (e.g., COVID-19, elderly people at home). It collects patient medical data from off-the-shelf medical sensing devices of most brands, pre-selected by the health organization, and uses the Sure Universal IoT gateway located at the patient site, to transfer the data securely towards the healthcare organization supervision stations and data-bases for professional continuous supervision.

Project goal:

The pilot will provide a direct validation of the functionality of the platform and a clear report on additional improvements required for technology scalability and optimal performance.

Project type:

The collaboration with our pilot partner will be beneficial in a two-folded manner: on one side, we will test our product in its natural environment before commercialization and on the other, we will be able to receive important feedback from an institution that mimics our client profile or may become a potential one. Moreover, the cooperation of the pilot site will allow us to fine-tune all parameters towards reaching commercial scale.

Eligible by the IIA
