

Short profile Selfit Medical

CHARITÉ/BIH-PARTNER WANTED!
More information [here](#)

Medical field	Neurology, Cardiovascular , Orthopedics, Oncology
Product (name and type)	Selfit, Medical Device
Growth stage	Proof of Concept
Founders	Shahar Figelman, Amit Katz

Description of product:

A therapist robot for physical and cognitive rehabilitation. The core element is an integration between the interaction and data modules. The interaction module is built on a robot which communicates with the patient using behavior science logics, vocal instructions and projected clinical workflows. The entire therapy interaction is projected on the floor using an ultra-short-throw projector and a depth camera for patient's monitoring.

Project goal:

Clinic: better functional outcome, improve ADLs, reduce labor resources and costs, reduce fall risk, streamline patient's data.

Company: establish health economics proposal document, publish results of study, co-development of the home care solution.

Project type:

Clinical trial, home use trial. The company is looking for a partner who provides expertise, allocates a PI, a team/staff for training, space for the device, defines the protocol and operate the clinical study.

Estimated duration: 12 months.

Eligible by the IIA
