Verified Planet Ltd.

CHARITÉ/BIH-PARTNER WANTED!
More information [here](#)

Medical field	Gynecology / IVF / Infectiology / Hematology
Product (name and type)	Noah, IOT based technology
Growth stage	Seed, certified for ISO 13485 (12/2019), FDA in process
Founders	Chen Sarfati Halabi (Founder, CEO)

Description of product:

IOT based technology for securing sensitive biological samples. The technology is a combination of a mechanical security solution and a cloud-web-based digital solution. The product secure & track sensitive biological samples along the samples chain of custody lab process.

Project goal:

Optimizing lab protocol and improving clinical success rates in IVF procedures. Ensuring safety, security and adherence. Developing a user-friendly product, connecting patients directly to the lab team.

Project type:

The company is looking for a partner at Charité to implement and pilot their digital specimen and laboratory management system with direct patient connection to the lab team. The company wants to learn local lab processes to enable the clinical partner to test the usability and efficiency of the system.

Estimated Project Duration: 2-3 Months.

Eligible by the IIA
