

Short profile Witalize Ltd.

CHARITÉ/BIH-PARTNER WANTED!
More information [here](#)

Medical field	All specialities / Healthcare IT
Product (name and type)	Cryptolize Data Security
Growth stage	Positioning for Scale, the solution passed Ernst and Young cybersecurity review
Founders	Vitaly Sirota (Founder, CEO), Nimrod Bar (COO)

Description of product:

Cryptolize is a cybersecurity solution, which could be used both on desktop computer and mobile devices. It provides end-to-end encryption for messages and documents exchanged over any communication channel between healthcare service providers, doctors and patients. Cryptolize is web-based and doesn't require installation, uses military strength encryption (AES-256 and P-521 NIST elliptic curve) and Zero Knowledge.

Project goal:

Demonstrate the ability to provide very simple solution to secure document exchange between multiple healthcare players. Defining specific workflows for information exchange over different communication channels for different use cases.

Project type:

The company searches for Charité partners to pilot the technology solution optimized for hospital workflows – especially around continuum-of-care, hospital at home and other use cases where cooperation between different organizations is needed.

Estimated Time for Validation: 3-6 months/ Estimated Project Duration: 1 Year

Eligible by the IIA
