Short profile

alephFS – systems for imaging

Medical field	Radiology
Product	“IMAGERight”, Medical Device (class 1), Diagnosis
Growth stage	Proof of Concept, CE/FDA not required
Founders	Reuven Levinson (Founder, Managing Director), Haim Danino (Development Manager)

Description of product:

IMAGERight is a new product for medical X-ray imaging: pre-clinical testing has been completed and demonstrates 50% dose reduction and improved image sharpness. IMAGERight is a new digital-designed anti-scatter grid, compatible for use with current diagnostic X-ray imaging systems. Based on patent pending technology developed and owned by the company.

Project goal:

- (1) Demonstration of reduced radiation dose on with chest, abdomen and orthopedic imaging examinations
- (2) Evaluation of improved image quality
- (3) Submission of results to peer-reviewed journal

Project type:

The company wants to perform clinical testing on the prototype IMAGERight at one of the partner hospitals. The company will install and set-up the prototype system on a designated x-ray system at the partner hospital. The partner hospital will design the clinical testing program and evaluate the imaging results from the testing program. Estimated Project Duration: 12 months.
